Solaris 2.5 Packaging

A

Solaris 2.5 contains Motif runtime and developer support as described in Table A-1. The first package is the run-time product and those that follow are the developers packages in the Software Developer's Kit.

Please refer to Chapter 2, "Motif Environment," for information about the environments and installing these packages.

Table A-1 Solaris 2.5 Environments

Name	Default Location	Description
`SUNWmfrun`	`/usr/dt`	Contains the Motif dynamic libraries, their header files, and an executable, xmbind and its man page.
`SUNWmfdev`	`/usr/dt`	Contains the Motif dynamic debug libraries and the `uil` compiler
`SUNWmfman`	`/usr/dt`	Contains the Motif man pages.
`SUNWmfwm`	`/opt/SUNWmfwm`	Contains the Motif window manager and its man pages.
`SUNWmfdm`	`/usr/dt/share/examples`	Contains the Motif demos.
