NAME

Intro – introduction to the OpenWindows Desktop Reference Manual

OVERVIEW

The Solaris OpenWindows system includes some sophisticated clients referred to as the Solaris DeskSet suite. These are workgroup productivity tools like **Calendar Manager** and **Mailtool** that take advantage of the value-added enhancements to the Solaris X server.

This manual and the *Solaris X Window System Reference Manual* cover all man pages that make up the **SUNWaman** software package, other than those in Section 3. This package is usually installed as part of the "Developer" software set during initial installation of Solaris. The default installation directory for these man pages is **/usr/openwin/man.** To access these man pages, add **/usr/openwin/man** to the **$MANPATH** environment varriable.

Name	**Command Description**
24to8(1)	convert a 24- or 32-bit rasterfile to an 8 bit rasterfile suitable for X11
ab_admin(1)	administer AnswerBook card catalog database(s)
ab_cardcatalog(4)	directory of available AnswerBooks
ab_library(4)	collection of AnswerBooks browsed and searched as a unit
answerbook(1)	browse, search, and view on-line documentation
audiocontrol(1)	audio control panel
audiotool(1)	audio play/record tool
binder(1)	modify deskset bindings database
calctool(1)	a desktop calculator
ce_db_build(1)	build a Classing Engine database from an ASCII description of the database or generate an ASCII description file of a CE database
ce_db_merge(1)	merge new information into a Classing Engine database from an ASCII description of the new information
clock(1)	display the time in an icon or window
cm(1)	calendar manager, appointment and resource scheduling tool
cmdtool(1)	run a shell (or other program) in an OpenWindows enhanced terminal window
cm_delete(1)	delete appointments from Calendar Manager database
cm_insert(1)	insert appointments into Calendar Manager database
cm_lookup(1)	look up appointments from Calendar Manager database
colorchooser(1)	change icon colors in deskset tools
convert_to_Xdefaults(1)	convert SunView1 defaults into equivalent Xdefaults

convert_to_xview(1)	convert a SunView1 source program to XView source
digestp(1)	See **mailp**(1)
docviewer(1)	OpenWindows viewer for AnswerBook on-line documentation
dsdm(1)	Drop Site Database Manager
ds_server_init(1)	store a property in the X11 server to reduce colormap flashing within the DeskSet applications
edit_demo(6)	ToolTalk client/server demonstration programs
filemgr(1)	a GUI-based file management application
filep(1)	See **mailp**(1)
filofaxp(1)	See **mailp**(1)
fish_props(6)	See **realxfishdb**(6)
fixframe(1)	convert FrameMaker 2.0 PostScript files to conform to the PostScript structuring conventions
fixinterleaf(1)	convert Interleaf PostScript files to conform to the PostScript structuring conventions
fmgc(1)	a program to garbage collect a users ~/.fm directory hierarchy
format_floppy(1)	diskette formatting program used by FileManager
franklinp(1)	See **mailp**(1)
helpopen(1)	utility for programmatically controlling 3helpviewerP
helpviewer(1)	OpenWindows viewer for on-line help handbooks
iconedit(1)	create and edit images for OpenWindows icons, cursors, and panel items
imagetool(1)	Image viewer for OpenWindows
locale_env(1)	locale_env - program for openwin-sys
mailp(1)	frontends to the mp PostScript pretty printer
mailprint(1)	filter to strip out mail message attachments
mailtool(1)	OpenWindows interface for the mail program
mp(1)	PostScript pretty printer
navigator(1)	browse and search AnswerBook on-line documentation
newsp(1)	See **mailp**(1)
olbiff(6)	OLIT mailbox monitor
olitsampler(6)	OLIT widget demo program
olittable(6)	OLIT widget demo program
olmh(6)	OpenLook interface to the MH message handling system
olwm(1)	OPEN LOOK window manager for OpenWindows
olwmslave(1)	olwmslave - helper program for olwm

openwin(1)	OpenWindows startup script
owplaces(1)	list client applications running on a display
pageview(1)	PostScript language previewer for OpenWindows
perfmeter(1)	display system performance values in multiple dials or strip charts
printtool(1)	OpenWindows tool for printing files
props(1)	graphical interface to set OpenWindows properties
rash(1)	Sun Raster to PostScript translator
realxfishdb(6)	Display a fishtank on the root window of an X11 server.
rpc.cmsd(1)	calendar manager service daemon
rpc.ttdbserverd(1M)	See **ttdbserverd**(1M)
shelltool(1)	run a shell (or other program) in an OpenWindows terminal window
snapshot(1)	capture some or all of a screen image and save to a raster file
spider(6)	play double deck solitaire
tapetool(1)	OpenWindows tool for reading files from tape or archiving files to tape
textedit(1)	XView-based text editor with mouse support
textedit_filters(1)	filters provided with textedit(1)
timemanp(1)	See **mailp**(1)
timesysp(1)	See **mailp**(1)
toolwait(1)	control client program startup
ttce2xdr(1M)	convert ToolTalk Classing Engine type tables to XDR format
ttcp(1)	copy files and inform the ToolTalk service
ttdbck(1M)	display, check, or repair ToolTalk databases
ttdbserverd(1M)	RPC-based ToolTalk database server
ttmv(1)	move or rename files and inform the ToolTalk service
ttrm(1)	remove files or directories and inform the ToolTalk service
ttrmdir(1)	remove empty directories and inform the ToolTalk service
ttsample1(6)	simple ToolTalk demo
ttsession(1)	the ToolTalk message server
tttar(1)	process files and ToolTalk objects in an archive
tttrace(1)	trace ToolTalk calls and messages
tt_type_comp(1)	compile ToolTalk otypes and ptypes
viewprint(1)	print AnswerBook documents using lp
vkbd(1)	virtual keyboard/soft function keys display manager
xview(7)	xview toolkit information

xv_get_sel(1)	copy the content of a selection to the standard output
